

JavaScript: Methods

JS - forEach

The following exercise contains the following subjects:

- ◆ forEach

Instructions

Complete the exercises below:

1.1- Basic loop

You are given this array:

```
const words = ["one", "two", "three", "four", "five"];
```

Loop over this array with the forEach method and console log each element and its index.

1.2- ToNumber

Create a **function** ToNumber that takes one argument an array.

Return from the function a new array changing the strings of numbers to actual numbers. Use the forEach method to accomplish this.

1.3-Fruits

You are given this array of fruits:

```
const fruits = ["mango", "papaya", "pineapple", "apple"];
```

Loop over this array with the `forEach` method and console log this sentence : “I am eating a <fruit name>”. But if the fruit is an apple. You need to console log “I am eating an Apple.

Notice we changed the “a” to “an”.

1.4- Mutate the array

You are given this array of numbers:

```
const numbers = [1, 2, 3, 4, 5];
```

Iterate over this array with the `forEach` method. With the help of the third argument of the `forEach` method (which is the array you are looping over) mutate the array that every number double value.
