

JavaScript: Methods

JS - find

The following exercise contains the following subjects:

- ◆ find

Instructions

Complete the exercises below:

4.1 – greater than

You are given this array of numbers:

```
const numbers = [1, 100, 67, -5, 6784, 356, 200];
```

Create a **function** that takes two arguments. An array and a number.

Using the find method return the number that is greater than the one provided from the function.

Notice what you are getting back.

4.2 – Inventory

You are provided this array of objects:

```
const inventory = [  
  { name: "apples", quantity: 2 },  
  { name: "bananas", quantity: 0 },  
  { name: "cherries", quantity: 5 },  
];
```

Create a **function** that gets two arguments, an array and fruit name.

Using the find method return the object that the fruit name is the same as you provided to your function.

Use the movie data for the following exercise:

4.3- Find by Id

Create **function** that takes two arguments an array and an id.

Using the find method return the movie with the id you provided to your function.
