

JavaScript: Methods

JS - sort

The following exercise contains the following subjects:

- ◆ sort

Instructions

Complete the exercises below:

5.1 – Ascending order

You are given this array of numbers:

```
const numbers = [1, 100, 67, -5, 6784, 356, 200];
```

With the help of the sort method, sort the numbers from descending to ascending order. (lowest to highest). Store the result in a variable.

5.2 – Descending order

With the same array sort the numbers from ascending to descending order (highest to lowest). Store the result in a variable.

Use your movie data to complete the following exercises below

5.3 – sort from highest rating

Create a **function** that takes one argument, an array.

With the help of the sort method return the movies sorted from the highest average rating to the lowest average rating
